Ceira has answered started this question correctly
Solve these equations simultaneously

$$
\begin{aligned}
& y=x^{2}+2 x+10 \\
& y=-3 x+4
\end{aligned}
$$

line 1
line 2

$$
x^{2}+2 x+10=-3 x+4
$$

$$
+3 x \quad+3 x
$$

line 3
$x^{2}+5 x+10=4$
line $4 \quad-4 \quad-4$
line 5 $x^{2}+5 x+6=0$

Study the solution carefully and answer these questions
(1) Ceira plans to solve the equation by factorising or using the quadratic formula, explain why she cannot stop at line 3.
(2) If the question was:

Solve these equations simultaneously

$$
\begin{aligned}
y & =x^{2}+2 x+10 \\
y+3 x & =4
\end{aligned}
$$
